

TIRE SIGNALS MAKE MONITORING AIR PRESSURE EASY

The [tireguard.com](http://thetireguard.com) has introduced Tire Signal, an inexpensive product that allows your drivers to be confident their tires are properly inflated. Tire Signals are valve stem replacements that screw onto the valve stem of each tire and measure the air pressure in the tires. They can be read with green, yellow and red color indicators.

Green indicates the tire is properly inflated. Yellow shows that the tire has lost about four pounds of air pressure and needs to be replenished soon. Red indicates the tire has lost eight or more pounds of air and must be serviced immediately in order to maintain a safe ride.

For more information, visit www.thetiresignal.com or call (516) 942-0264 on the West Coast, call Bill Falkenberg, (815) 353-8717.
